

Dear FCC,

I firmly believe that the RM-10352 proposal for 160 meter band mode segmentation should be implemented. I support the FCC petition to have CW mode authorized on the whole band from 1.8 Mhz to 2.0 Mhz, and to limit wideband modes, such as SSB, to frequencies above 1.843 Mhz. This is a very logical segmentation, which is very similar to segmentation in place for ALL the other ham bands. I feel this is a very reasonable proposal for limiting mode conflicts on 160 meters.
